Dear Sir:—

We herewith take pleasure in handing you special list No. 79, in which you will find as large and varied a collection of Orchids as it is possible to find anywhere. You will also find listed some of our native hardy orchids but these we can only furnish in the Spring and Fall.

ALL PLANTS MARKED × ARE HYBRIDS.

In ordering please use number in left margin only and give number of list.

All prices in this list are net cash, F. O. B. Summit, N. J., but 2% may be deducted when remittance is sent with order.

Trusting to be favored with your valued order.

We are, yours respectfully,

LAGER & HURRELL.

ORCHIDS, CULTURAL DIRECTIONS

The orchids are without question the most beautiful and most lasting flowers in all the floral kingdom, and also the easiest grown plants of any, if a few common-sense points are observed.

Ventilation—Orchids delight in fresh air at all times when weather permits. During the warmest part of the summer months it is beneficial to leave the ventilators slightly open at night.

Shading—The glass should be lightly shaded from about February 15th to September 1st, or the sun will burn the plants. During the rest of the year clear glass is desirable.

Watering—When watering see that plenty is given and then allow the plants to dry out before giving more, this will keep the compost in the pots in good condition for a long time. The atmosphere in the house should be moderately moist.

Temperature—A night temperature of 58 to 60 and correspondingly higher in the daytime will suit the greater number of orchids.

Potting—Firm potting is absolutely necessary. Orchids will not grow well and thrive if loose in the pots or baskets. In repotting, care should be taken not to disturb the roots, rather break the pots, while the baskets may be taken apart carefully and the plants placed in new baskets working the material around the plants firmly. This is generally done by placing the material used between the rim of the pot or basket, and the ball of the plant pressing the material towards the plant. When no more material can be conveniently used it will be found the plants are very firm in the receptacle. Avoid overpotting and do not disturb the plants unless necessary.

Materials for Potting—The best material for potting orchids is osmunda fibre, commonly called peat. A few lumps of charcoal and pieces of broken pots may be added to advantage, also a little live sphagnum moss.

Time for Potting—In the greater majority of cases the time for potting is immediately after the plants finish flowering. The plants are more dormant than at any other other time notably such as Cattleyas, Laelias, Oncidiums, and Odontoglossums and many more. With these general directions anyone will be able to grow orchids and reap a rich harvest of these exquisite flowers.

CYMBIDIUM

One of the finest and most useful genera of orchids, both for cutting and exhibitions. The flowers are usually large and attractive, many flowers on sprays, in various colors and shades. Like the Cypripedium the flowers are of unusual lasting qualities. The plants are of easiest culture, requiring plenty of pot room, and should be potted in fibrous loam, rough peat, and sand, with good drainage, and an abundance of water during the growing season.

DENDROBIUM

Most of the commercial Dendrobiums are easily cultivated, and their brightly-colored flowers are freely produced if it is borne in mind that as a general rule they require heat and abundance of moisture when growing, a season of cooler temperature, and a reasonable exposure to air and light to ripen the growth, and a drier season to produce and mature the flowers.

CYPRIPEDIUM (LADY SLIPPER ORCHID)

The following list of Cypripediums is without doubt the largest and most varied collection of these plants carried by any commercial house in America. Nothing in the entire Orchid family offers such a great number of species, varieties and hybrids as do the Cypripediums. They are a constant source of interest to the cultivator.

No.	Name	Size	Price
The flowers when cut will outlast anything else we know, and besides they are the easiest orchids of all to grow with few exceptions. In ordering please use number in left margin, and give number of list.

CYPRIPEDIUM—Continued Selenipedium Section

These are so distinct in regard to habit of the plants, colors and shapes of the flowers, that they really form a separate group and we have listed them below, apart from the others. Many of them have long, ribbon-like petals, and all produce a number of flowers on tall scapes, one after another. It is thus possible to have these plants in flower for a long time, for as soon as one flower drops, another takes its place.

The colors of many are white, or nearly so, others rose pink to purple, while some are green, suffused with yellow and purple. They are of easiest culture and form handsome and stately subjects in the greenhouse or conservatory when in flower.

BOOKS ON ORCHIDS

During and since the war, books on orchids have not been available, except a few copies. We have a copy of each of the following listed below which we offer subject to being unsold when ordering. We may be able to secure others from time to time, but we cannot tell at present what they will be. Hence we advise prospective customers for books on orchids to write us and if we have any on hand we will be glad to state the kind of books we have and prices of same.

"Manual of Orchidaceous Plants," by James Veitch & Sons. Freely illustrated with woodcuts and maps. 2 vols., cloth 8vo. One set only, price \$75.00. The above has always been and is now a classic on orchids.

"Orchids, The Royal Family of Plants," with illustrations from nature, by Harriet Stewart Miner. A splendid work on orchids, with 24 colored plates, measuring 10" x 12½". 90 pages, one copy only, \$25.00.

"The Orchid Stud Book," by Robt. Allen Rolfe and Charles Chamberlain Hurst. An enumeration of Hybrid Orchids of artificial origin, with their parents, raisers, date of first flowering, etc., with an historical introduction and a chapter on hybridizing and raising orchids from seed, \$7.50.

"The Orchid-Grower's Manual," by B. S. Williams. 8vo, gilt edge, cloth, 300 illustrations. Descriptions of all kinds of orchids and general cultivation. One copy only, price \$20.00.

"Fertilization of Orchids," by Charles Darwin. Illustrated. One copy only, price, \$5.00.

HOW TO KEEP CUT ORCHIDS

Orchids as a whole keep longer cut or on the plants than most other flowers. This is due to the presence of mucilage in the flowers. The question, however, is very often asked, how can I keep my orchids after they are cut?

In answer to this, the following will probably be useful. If you have orchids in your greenhouse cut the flowers in the morning or late in the evening. Never cut them when the sun is full on the glass. Place them in cold water in any place free from gas and where the temperature does not exceed 60°. Leave the flowers in this position for several hours before using them. Whenever practical use an earthenware vase instead of glass or metal. When the flowers are used on the table, and they have served the purpose remove them and place them as indicated above in an earthenware vase, and in a temperature of minimum 56°, maximum 60°. The next time after the flowers have been used cut off the lower part of the stem 1-16 of an inch, and replace in water. Never subject your flowers to a low temperature. They are tropical and cannot stand cold with impunity. If you follow these instructions you will be able to enjoy your orchids much longer than in any other way.
